What is DEAS?

- DEAS = Deutscher Alterssurvey = German Ageing Survey
- Cross-sectional and longitudinal survey
- German population of 40+

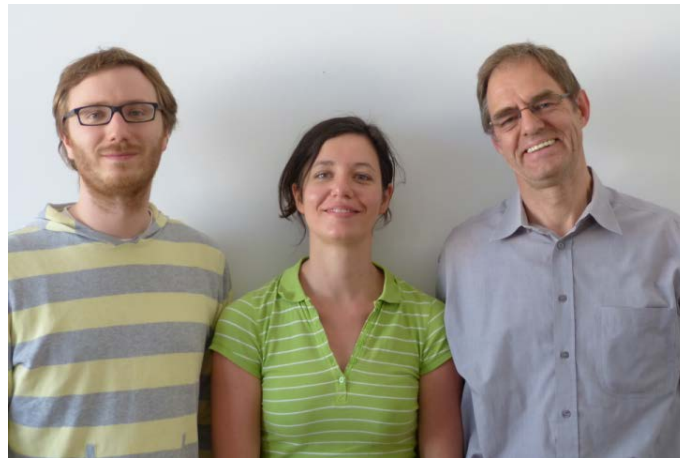

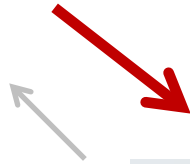

Sampling 1996 – 2011

Sampling 1996 – 2015...

variables. Please contact the → [FDZ-DEAS team](#).

- In order to facilitate longitudinal and time-series analyses, the FDZ-DEAS offers a Variable Correspondence List (with English and German variable labels) for the first three DEAS waves. With this chart, it becomes obvious which information has been surveyed in which year and how the respective variable names are named.
- In the Codebooks we compiled every variable of each survey year with their individual categories (including missing values), labels and overall frequencies.
- The sampling procedure, the conducting of the survey and the data gathering for all three DEAS waves have been executed by the infas Institut für angewandte Sozialwissenschaft (Bonn). For the survey years 2002 and 2008, the Methodological Reports (German only) are available.
- For the supplemental data (regional context information, job demands), documentation is also provided (currently in German only).

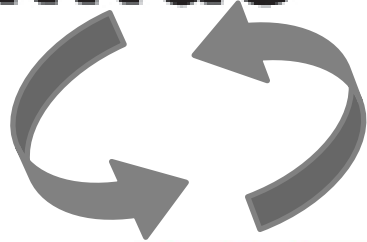

If you use the content of these documentation objects for publications, we kindly request you to indicate the source according to the rules of good scientific work.
